

Blademan

Fast and easy pepper crop rotation.

For pepper crop rotation the Blademan is designed together with their customers. The Blademan is developed to save time and labour during the crop rotation period. The Blademan can save you 35% labour costs and the crop drops into the cloth in the right direction.

Advantages

- Can be mounted on existing pipe-rail trolleys.
- Adjustable to suit most growing systems.
- 35% labour saving.
- Improvement of working conditions/environment.

Specifications

The Blademan consist out of an aluminium blade and a construction which you can mount on a pipe-rail trolley. With the adjustable construction, you can fine tune the Blademan to the growing system. On the frame, knives or an electric scissor can be mounted to cut through the ropes or the crop, just under the metal crop wire. Does your crop stay under the crop wire? You can use knives to cut through the ropes. If the crop grows higher, you need an electric scissor to cut through the crop.

Options

- Left or Right version.
- Knives.
- Electric scissor.
- Power generator for electric scissor.
