

De-leafing bin

Efficient discharge of leaves.

From a hygienic perspective, some growers choose not to throw the leaves on the ground, but to discharge them from the greenhouse immediately. Especially when there is no room under the gutter. To facilitate this method, we designed the de-leafing bin. The bin can be pushed over the pipe-rail system and the cut-off leaves are collected in the bin. When the bin is full, it can be transported in a train or by fork lift out of the greenhouse. The bin can be emptied by tipping it above a waste-container or a compost heap.

Advantages

- Robust design.
- Heavy duty wheels.
- Low roll friction.
- Labour saving.
- Hygienic.
- Connectable in a train.

Specifications

Length:	1880mm
Width:	478mm
Height:	1000mm
Volume:	650Ltr
Pipe-rail size:	425-550mm
Frame:	Steel
Wheels:	4x caster, 2x centre wheel
Connectable:	Yes
Extra:	Forklift provisions 180x80mm C.t.c. 720mm
