

## Decontamination mats

*Keeping your shoes bacteria free.*

At Luiten Greenhouses we can provide you with various products that ensure better hygiene within the greenhouse. Disinfection mats are a part of this. These disinfection mats ensure that the shoes of your staff are cleaned when they walk over them. We can also deliver mats that not only clean the shoes of your staff but can also be driven over by your forklift or pump truck. This way, the wheels of these vehicles are also cleaned before they enter the greenhouse. In this leaflet you will find an overview of all the different mats we can supply.

### Disinfection mat standard

Disinfection mat standard is only suitable for disinfecting the underside of the shoes. This mat can only be refilled from the top with disinfectant. This mat meets the minimum requirements to disinfect the underside of the shoe soles of your employees before they enter the greenhouse. This mat is not suitable for forklift or pump trucks.

#### Available in variable sizes:

- 60x90cm
- 90x90cm

### Flexxomat PT

The Flexxomat PT disinfection mat is the preventive hygiene solution for personnel traffic in the food industry, greenhouse horticulture, agriculture and laboratories. Within the framework of quality management systems, such as HACCP, IFS, BRC, GSPP ISO 22000, etc., the risk and high care zones of production companies can be protected even better against the introduction of micro-organisms and their possible consequences.

The Flexxomat PT is made with a refill tube on the side and a disinfectant diffusion tube inside for even spreading.

To save on labour and prevent the flexxomat PT from drying out, this mat is equipped with a tunnel.

This tunnel ensures that the mats can be connected to an automatic filling system. This can be regulated with our dosing pump or venturi pump.

This mat is also not suitable for forklift or pump trucks.

#### Available in variable sizes:

- 90x90cm
- 180x90cm
- 180x180cm

## Flexxomat TT

The Flexxomat TT disinfection mat is the preventive hygiene solution for passenger and transport traffic in the food industry, greenhouse horticulture, agriculture and laboratories. It is also very suitable for places where many people come together, such as large events, trade fairs and airports. Within the framework of quality management systems, such as HACCP, BRC, IFS, GSPP, risk and high care zones of production companies can be protected even better against the introduction of micro-organisms and their possible consequences.

For an effective and disinfectant-efficient use, the Flexxomat TT is equipped with an internal liquid distribution tunnel. The mat can then be connected to a dosing pump via an external hose grommet. The maintenance of the disinfection fluid in the mat is thus relieved and always guaranteed.

The Flexxomat T is unique and can be used for various types of (internal) transport, whereby the mat, due to its innovative design and reinforcements (patented), does not need to be secured to the substrate.

### Available in variable sizes:

- 100x221cm
- 150x221cm
- 200x221cm
- 300x221cm
- 400x221cm
- 500x221cm
