

## Luiten Greenhouses: Pipe rail vacuum cleaners

### **Designed for the pipe-rail system**

The Comzu leaf vacuum sweeper is perfect for substrate growers. This device quickly and efficiently vacuums leaves and foliage from paths, as well as being highly suitable for tomatoes, peppers, cucumbers and other crops.

The COMZU leaf collector keeps your greenhouse clean and brightens it by ensuring maximum reflection. This means no more sweeping and no accumulation of dirt between the pipe rail system.

### **Leaf vacuum sweeper 11 Hp**

The Comzu leaf vacuum sweeper is perfect for substrate growers. This device quickly and efficiently vacuums leaves and foliage from paths, as well as being highly suitable for tomatoes, peppers, cucumbers and other crops.

The COMZU leaf collector keeps your greenhouse clean and brightens it by ensuring maximum reflection. This means no more sweeping and no accumulation of dirt between the pipe rail system.

Because of the weight of the leaves in as well tomato, cucumber growing we recommend you to choose at least the 11 PK type. Difference in price of the basic model 5,5 and 11 PK is approx. € 1.000,00.

### **Leaf vacuum sweeper 13 Hp**

The new leaf vacuum sweeper is equipped with a hydraulic operation system, side brushes and a container with bottom discharge.

The side brushes sweep the leaves underneath the pipes to the centre of the path, after which it is absorbed and fragmented by the leaf collector. The side brushes allow you to move the suction mouth across the pipe rail system twice as fast.

The specially designed 300-litre container with bottom discharge (patent pending, application number 1013237) is easy to empty using a forklift truck or tackle.

*Growing together for an optimal result!*

## Luiten Greenhouses: Pipe rail vacuum cleaners

Advantages of this innovative new leaf collector over existing collectors:

- Works twice as fast.
- Scrubs off more encrusted dirt, resulting in cleaner foil or canvas.
- A single machine has a working width of between 500mm and 1,600mm.
- Bottom discharge system provides greater absorption capacity (300 litres versus 100 litres) and there's no longer any need to lift the container

### **Leaf vacuum sweeper 13Hp HABL**

This leaf vacuum sweeper, featuring a driver's seat, is specially designed to remove leaves from paths even more efficiently.

Its operating speed is fully adjustable, ranging from 0 to 8 km/hour. The height of the leaf collector's suction mouth can be hydraulically adjusted, and when you drive up or down the pipe rail system, you can also hydraulically operate the castor wheel at the rear of the leaf collector from the driver's seat.

This leaf collector works 2 to 3 times faster than the walk-behind version.
